

WARNING Use with Extreme Care

ADVANCED USERS ONLY

IF you are unsure DONOT edit registry as it can Kill the PC !

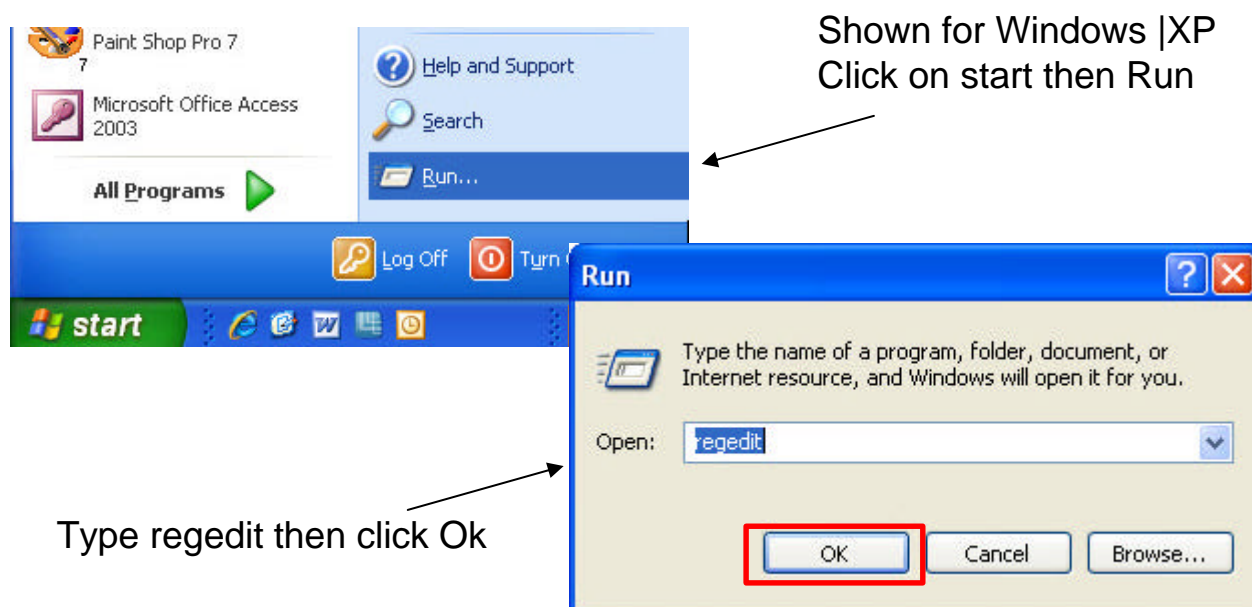

Some problems in Dairyplan for example DPList not working and giving error message about dll file problems can be caused by bad entry in windows

Most of DairyPlan Registry entries can be deleted without any problem as each program recreates them when it is run next time

Donot delete all entries as this can cause problems with Later Versions of DP if the Entry for DPInstall is missing

Just delete the entry for the particular DP program that is giving problem  
In this example I delete DPList entry

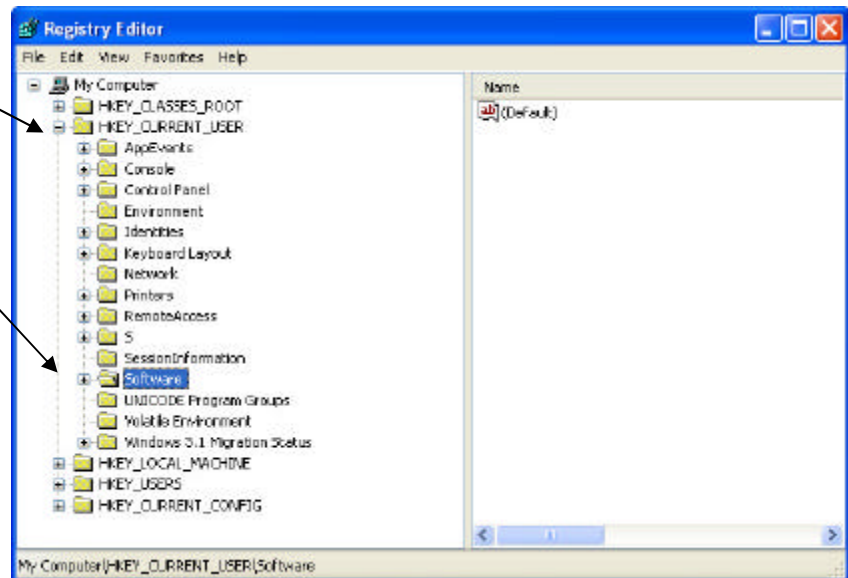

*(Registry entries are called Keys)*

# DairyPlan C21 Registry Entry Deleting

Click on the Plus sign next to HKEY\_CURRENT\_USER

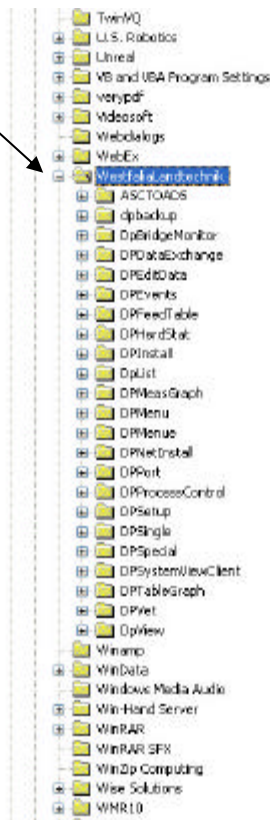

Click on the + sign next to Software

Scroll down the long list until you See Westfalialandtechnik

Click on the + sign

You will now see list of Dairyplan Programs

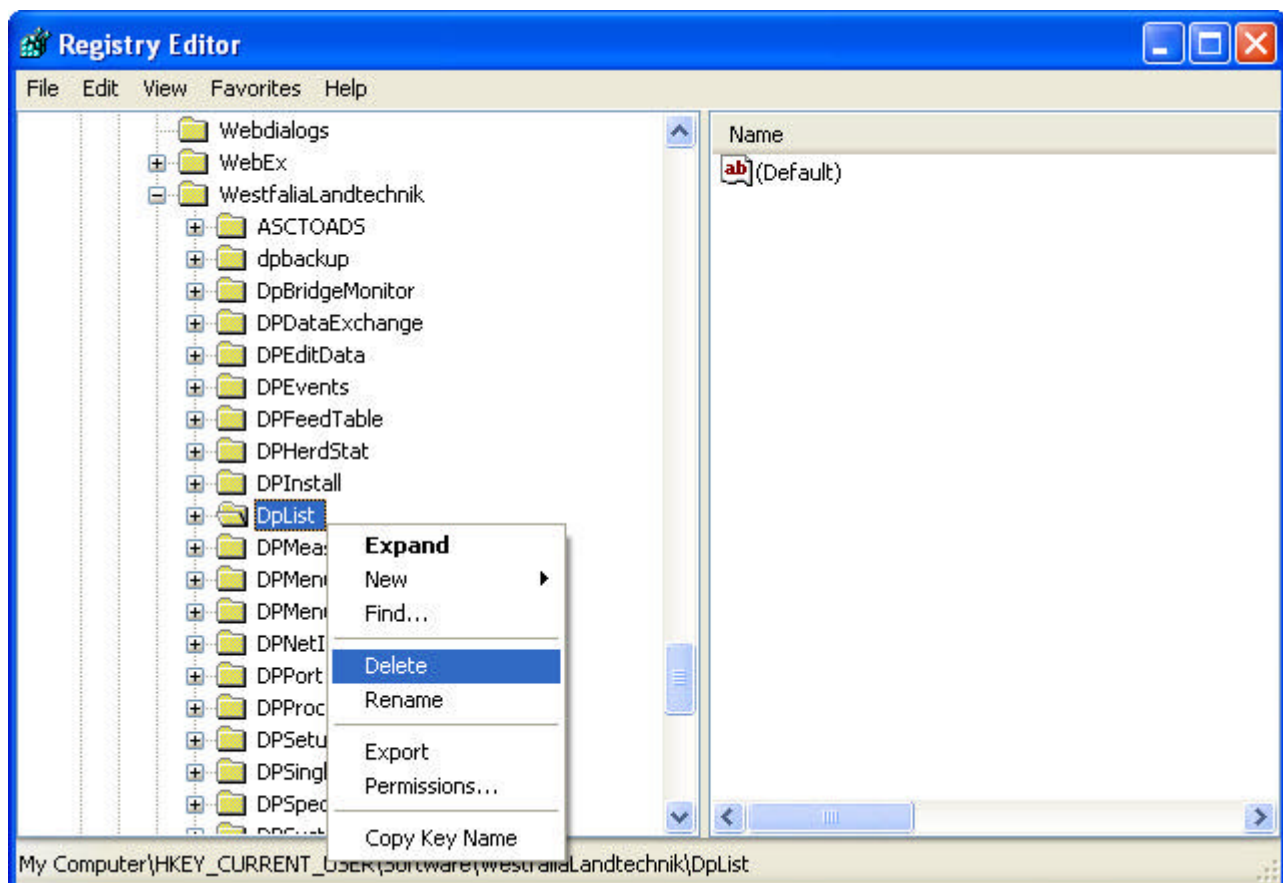

Left Click on the program you want to delete the Registry Key In this example DPList  
Then Right Click on DPList  
Make sure the correct key is highlighted !

**Warning the is No Undo option !**

*You can Export the Key by clicking Export and save it  
You can re-import this Key if required*

**Make sure the correct key is highlighted !**

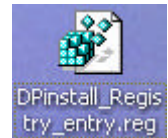

Then Click Delete this will delete Entry Permanently

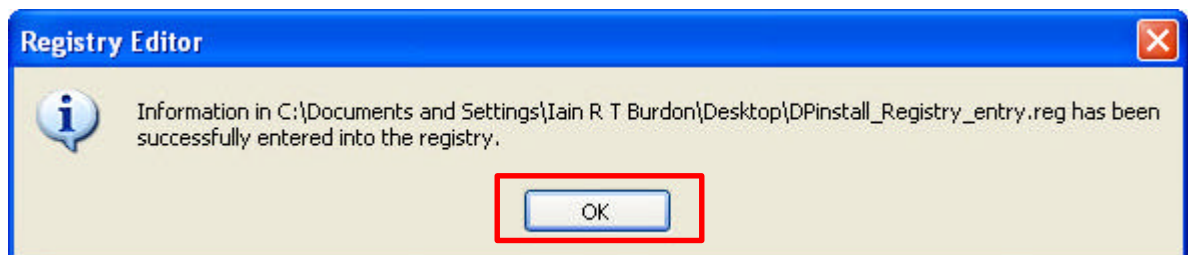

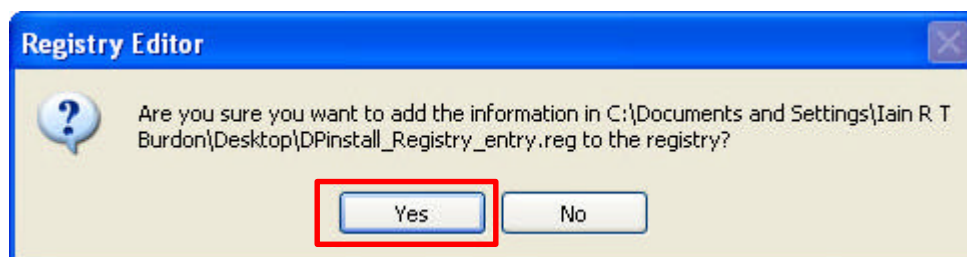

Close Registry Editor by Menu File / Exit

## Importing Registry Keys

It is possible import a Registry Key in this example I import the Key for DPInstall  
Double click on the Reg file

Click screens as shown below

This Registry Key is very important for later versions of Dairyplan especially Metatron21 and Dematron installations. DPProcesscontrol will not run On these DPNet installations without it !

If a PC has been replaced and the Customer IT person has just copied the Dairypln Folder onto New Computer This key will needs to be added !

I have put this file onto WS Info DVD & also Web at  
[www.Westfaliasurge.me.uk/regkey](http://www.Westfaliasurge.me.uk/regkey)
